Radioactive waste, online the new ISIN National Inventory

The new ISIN "[National Inventory of Radioactive Waste](#) [1]" is now available online on our website.

The document contains information relating to volumes, masses, physical state, specific activity, radioactivity content and storage conditions of waste, including spent fuel and disused sources.

Prepared on the basis of the data that annually the various operators, who have primary responsibility for the safe holding and management of the waste themselves, transmit to the Inspectorate, the Inventory online today is updated to 31 December 2018.
